

How SpecReview protects your drawings

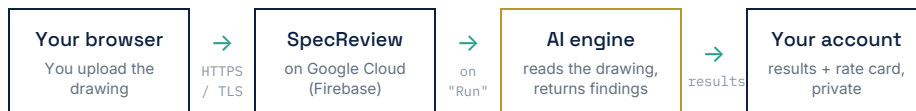

A short, plain-language summary you can share with your quality, IT and security teams.

OUR CORE COMMITMENT

Your drawing is processed, not stored.

A drawing is sent for analysis **only at the moment you click Run**. It is used to generate your outputs and is **not retained on our servers after the analysis completes**. We keep the results you generate and your own rate card — under your account, private to you.

► How your data flows

The drawing travels encrypted, is analysed on demand, and is not kept server-side afterwards. Only the generated results are stored — under your account.

► What we do

- ✓ **Encrypted in transit** — all traffic is over HTTPS / TLS.
- ✓ **Processed on demand** — the drawing is only sent for analysis when you press Run.
- ✓ **Not retained after analysis** — the drawing itself is not stored on our servers once the outputs are produced.
- ✓ **Per-account isolation** — your rate cards and history are private to your account and never shared with other users.
- ✓ **Reputable infrastructure** — hosted on Google Cloud (Firebase).
- ✓ **No card data** — payments are by UPI; we never see or store card / bank credentials.

► What we store

- ✓ **The results you generate** — audits, should-cost, quality documents — so you can re-download them from History.
- ✓ **Your rate card** — so your should-cost stays accurate across sessions and devices.
- ✓ **Your profile** — name, company and contact, used only to address your invoices and support.

You can delete a drawing's results from History at any time. To remove your account and its data, email support.

► For sensitive, export-controlled or NDA work

For defence, aerospace or export-controlled parts where data must not leave your environment, we can offer a **dedicated single-tenant deployment** (your own isolated instance and storage, in a region you choose), and an **on-premise / local-server option** is available on request. Talk to us about your specific security requirement and we will scope the right arrangement.

Questions from your IT / security team? Write to support@specreview.in and we'll respond directly, including a data-flow walkthrough or a security questionnaire if you need one for vendor onboarding.
